

Yaswanth Kobaku

Penetration Tester (VAPT) | AI-Driven Security

+91 94409 08784 | uniquelyashu14@gmail.com | linkedin.com/in/yaswanth-kobaku
github.com/Yaswanthkobaku09 | Portfolio: yaswanthkobaku09.github.io/cyber

Summary

M.Tech (Information Security & Cyber Forensics) candidate and penetration tester with hands-on VAPT experience across web applications, networks, and endpoints following OWASP Top 10 and WSTG. Ranked **Top 3% globally on TryHackMe**. Skilled at pairing manual testing with **AI-driven automation** (Claude and agentic frameworks) to accelerate assessments while verifying every finding. Seeking a full-time penetration testing / security engineering role.

Skills

Penetration Testing: VAPT, OWASP Top 10, WSTG, Reconnaissance, Vulnerability Assessment, Exploitation, Reporting

Tools: Burp Suite, Nmap, Metasploit, SQLMap, Wireshark, Nikto, OWASP ZAP, Gobuster, Hydra, The Harvester

Security Domains: Web App Security, Network Security, Digital Forensics, Malware Analysis, OSINT, IDS/IPS

Forensics: Volatility, FTK Imager, OS Forensics, PE Studio, PE Xplorer

AI & Automation: AI-driven VAPT agents, LLM-guided fuzzing, Adversarial ML, Prompt-injection defense

Languages & Platforms: Python, C++, SQL, Kali Linux, Git, TryHackMe, PortSwigger

Experience

VAPT Intern — SecNinjaz Technologies (AI-Native Cybersecurity)

Apr 2026 – Present

New Delhi, India (Onsite)

- Perform authorized web-application and infrastructure penetration tests end to end — reconnaissance, exploitation, and reporting.
- Built and operate a custom **AI VAPT agent** (Claude + agentic frameworks); solved **30+ vulnerable lab machines** and ran full web & infra test passes, with human verification of every finding.
- Deliver evidence-backed reports with proof-of-concept, CVSS severity ratings, and actionable remediation guidance.

Ethical Hacking / VAPT Intern — Prog Master Pvt Ltd

Sep 2024 – Feb 2025

VAPT, OWASP, Security Tooling

- Applied OWASP Top 10 techniques to detect SQL Injection, XSS, and misconfigurations across web apps and networks.
- Conducted VAPT on web applications, Android applications, and endpoints using Kali Linux.
- Authored technical reports with reproducible proof-of-concept evidence and remediation strategies.

Projects

Autonomous VAPT Multi-Agent Orchestrator

Python, Multi-Agent AI

Planner, recon, exploitation, and privilege-escalation agents that automate VAPT tasks against authorized labs.

LLM-Guided Fuzzing for Vulnerability Discovery

Python, AFL++, LLM

Augments a coverage-guided fuzzer with LLM seed generation and crash triage for faster bug discovery.

Web Application Penetration Test — WSTG / OWASP

Burp Suite, OWASP

Complete WSTG v4.2 / OWASP Top 10 assessment: scoping, evidence-backed findings, CVSS ratings, and remediation.

Achievements & Research

- Top 3% globally on TryHackMe**; active hands-on practitioner on TryHackMe and PortSwigger.
- Solved **30+ vulnerable lab machines** autonomously using a self-built AI VAPT agent.
- Authored **3+ research papers** on AI in Cybersecurity (autonomous security testing, adversarial ML, trustworthy AI).

Certifications

Certified Ethical Hacker (CEH) — EC-Council (Nov 2025)

Cyber Security Analyst — Cisco (Mar 2026)

| **Ethical Hacking** — Cisco (Mar 2026)

Education

M.Tech, Information Security & Cyber Forensics — Lovely Professional University

Aug 2025 – Present

Phagwara, Punjab

B.Tech, Cybersecurity (IoT & Blockchain) — Siddharth Institute of Engineering & Technology

2021 – 2025

Puttur, Andhra Pradesh
