SKILLS

Pen Testing:	VAPT, OWASP Top 10, WSTG, Reconnaissance, Vulnerability Assessment, Exploitation, Reporting, Threat Modeling, Privilege Escalation, Red Teaming
Tools:	Burp Suite, Nmap, Metasploit, SQLMap, Wireshark, Nikto, OWASP ZAP, Gobuster, Hydra, The Harvester, Nessus, ffuf, John the Ripper
Security Domains:	Web App Security, Network Security, Digital Forensics, Malware Analysis, OSINT, IDS/IPS
Forensics:	Volatility, FTK Imager, OS Forensics, PE Studio, PE Xplorer
AI & Automation:	AI-driven VAPT agents, LLM-guided fuzzing, Adversarial ML, Prompt-injection defense
Languages/Tools:	Python, C++, SQL, Kali Linux, Git, TryHackMe, PortSwigger, Hack The Box

EXPERIENCE

Cybersecurity Intern — SecNinjaz Technologies (AI-Native Cybersecurity) Apr 2026 – Sep 2026

New Delhi, India (Onsite)

- Performed end-to-end **web and infrastructure penetration testing** — reconnaissance, exploitation, and reporting.
- Performed **VAPT** under the **NABL-accredited STQC lab**, following standardized, compliance-driven procedures.
- Built and operated a custom **AI VAPT agent** (Claude + agentic frameworks); solved **30+ vulnerable lab machines** and ran full web & infra test passes, with human verification of every finding.
- Identified, validated, and **risk-prioritized vulnerabilities**, retesting fixes to confirm remediation.
- Delivered **evidence-backed reports** with PoCs, **CVSS** severity ratings, and remediation guidance.

Ethical Hacking / VAPT Intern — Prog Master Pvt Ltd

Sep 2024 – Feb 2025

VAPT, OWASP, Security Tooling

- Applied **OWASP Top 10** to detect **SQL Injection**, **XSS**, and misconfigurations across web apps and networks.
- Conducted **VAPT** on web, Android, and endpoint targets using **Kali Linux**.
- Performed **reconnaissance, scanning, and exploitation**, strengthening skills in **vulnerability assessment** and threat analysis.
- Authored technical reports with reproducible **proof-of-concept** evidence and remediation strategies.

PROJECTS

Autonomous VAPT Multi-Agent Orchestrator

Python, Multi-Agent AI

- Planner, recon, exploitation, and **privilege-escalation** agents that automate **VAPT** tasks against authorized labs.
- Benchmarks agent success on **known versus novel vulnerabilities** to measure real-world generalization.

LLM-Guided Fuzzing for Vulnerability Discovery

Python, AFL++, LLM

- Augments a **coverage-guided fuzzer** with **LLM seed generation and crash triage** for faster bug discovery.
- Compares LLM-guided against baseline fuzzing to quantify **genuine discovery** over memorized results.

Web Application Penetration Test — WSTG / OWASP

Burp Suite, OWASP

- Executed a full **WSTG v4.2 / OWASP Top 10** assessment covering **authentication, session management, injection, and access control**, with clear scoping and evidence-backed findings.
- Documented reproducible **proof-of-concepts**, assigned **CVSS** ratings, and mapped each finding to its **CWE** and business impact.

ACHIEVEMENTS & RESEARCH

- Top 3% globally on TryHackMe**; active hands-on practitioner on TryHackMe and PortSwigger.
- Solved **30+ vulnerable lab machines** autonomously using a self-built AI VAPT agent.
- Conducted **research on AI-driven security and AI security testing** — how autonomous agents strengthen and stress-test modern defenses.
- Authored **3+ research papers** on AI in Cybersecurity, spanning autonomous security testing, adversarial machine learning, and trustworthy, explainable AI systems.

CERTIFICATIONS

Certified Ethical Hacker (CEH v13) — EC-Council, Nov 2025

Cyber Security Analyst — Cisco, Mar 2026

Ethical Hacking — Cisco, Mar 2026

EDUCATION

Lovely Professional University

Phagwara, Punjab

Master of Technology

Aug' 25 – Present

Information Security & Cyber Forensics

Siddharth Institute of Engineering and Technology

Puttur, Andhra Pradesh

Bachelor of Technology

Dec' 21 – Apr' 25

Cybersecurity including IoT & Blockchain technology
